

Would you *bet your business* on your AI-built app?

FOR NON-TECHNICAL FOUNDERS

The **Production Readiness Assessment** surfaces your app's issues, clarifies the business risks, and explains what to fix to make it dependable. Andy Laken reviews your code and live database himself, then gives you a prioritized plan you can act on.

Your AI-built app might look finished – while exposing customer data, producing wrong results, or breaking when you add features.

What you take away

Full clarity on what's solid, what's broken, and the path to making the app dependable.

Deliverables: executive briefing • detailed technical findings • 30-minute advisory readout call.

What the assessment covers

Security and access

Authentication, permissions, exposed secrets, vulnerable dependencies, and database access rules (whether a user can see another's data).

Data integrity and app behavior

What gets saved, read, and shown – including lost records, stale results, and flawed app logic.

Reliability and operations

Data loss, competing users, background jobs, silent errors, and gaps in deployment or monitoring.

Architecture and change safety

Code and database structure, tests, and migrations – and whether fixes or new features can be made safely.

Why Andy

Every assessment is done by Andy Laken: 20+ years web building experience, startup cofounder, former Director at Acquia.

[See Andy's background →](#)

After the Assessment

Hand the findings and plan to a developer, or talk to me about separately scoped implementation.

Timing and fit

Delivered **within four business days** once the necessary access is set up.

Start by booking a free intro call

Tell me about your business and your app, and what has you worried.
